

green machine

energy-efficient & cost-effective

The SWIFT Drive offers the latest in energy-saving technology. With the ever increasing demand for electronics in the workplace, energy bills are skyrocketing. The SWIFT Drive helps to ease the load by re-using energy that would normally be wasted. With the dynamic of electricity, volts and amps need to be in harmony, otherwise energy is wasted. The SWIFT Drive achieves this power factor close to the ideal of 1.0, perfect harmony, where most drives run between 0.74 and 0.89. The SWIFT Drive is clearly the best choice for modernizing or in new construction of high-speed gearless elevator systems.
